

Press Information

Rücker Lypsa S.L. is now EDAG Engineering Spain, S.L.

Bundled engineering competence for the local Spanish and international markets

Barcelona, 11th January, 2021

Barcelona-based company Rücker Lypsa S.L. has been operating under the name of "EDAG Engineering Spain, S.L." since January, 2021. With this change of name, the subsidiary, which has been part of the EDAG Group since 2013, is documenting its relationship with the world's largest independent engineering service provider.

With a workforce of more than 500 employees, the Spanish subsidiary in Barcelona is one of the EDAG Group's largest foreign branches. As well as providing classical design and simulation services, the company has the EDAG Group's largest styling centre with a workforce of more than 150 employees. The range of vehicle design services covers exterior and interior design, from "colour & trim" to user interface design, the visualisation and simulation of new HMI concepts, and the production of design models and show cars.

Headed by Managing Directors Barbara Kersten and Michele D'Alessandro, the Spanish EDAG team also offers comprehensive engineering services in the areas of vehicle development, vehicle electrics/electronics, autonomous driving, connectivity & user experience, mobility & cloud services, and process and product data management.

"Our visible inclusion in the EDAG Group, the world's largest independent engineering service provider to the mobility industry, will open up further synergies and prospects for ourselves and our customers. Due to the global orientation of the EDAG Group, our site in Barcelona will also achieve a large international presence and continue to gain access to future-oriented development projects for existing and new customers," emphasises Barbara Kersten, Managing Director of EDAG Spain.

"And, of course, the close-to-customer support of projects for the Spanish mobility industry will continue to be one of our main points of focus".

ABOUT EDAG

EDAG is an independent engineering service provider working for the global automotive industry. The company has a global network of some 60 branches at the world's major automobile centres to serve leading national and international vehicle manufacturers and technologically discerning automotive suppliers.

In addition, EDAG also offers engineering services in the vehicle engineering, electrics/electronics and production solutions segments. This extensive competence enables EDAG to provide its customers with all-round support, from the original idea to design, through to product development, prototype construction and even turn-key production systems. As an innovative technological leader, the company also has competence centres for ground-breaking future technologies for the automotive industry: lightweight design, eMobility, digitalisation, integral safety, cyber security and new production technologies.
